Harsh Popat

AI/ML ENGINEER | DATA SCIENTIST

+91 9624834116 | Kota, Rajasthan, India | harshpopatk5@gmail.com

ABOUT ME

Computer Science undergraduate at IIIT Kota with hands-on experience in AI/ML, computer vision, and automation systems. Built end-to-end machine learning platforms including AutoML workflows, intelligent health systems, and real-time object detection applications. Skilled in Python, TensorFlow, and full-stack development with strong interest in AI engineering and cybersecurity.

EDUCATION

B.TECH IN COMPUTER SCIENCE AND ENGINEERING : INDIAN INSTITUTE OF INFORMATION TECHNOLOGY (IIIT) KOTA

- 2025-2029 CGPA: 7.96

WORK EXPERIENCE

ML Developer | Personal Projects **2025-2026**

- Built an end-to-end AutoML platform that automates data preprocessing, model training, evaluation, and deployment for 5+ machine learning models.
- Developed real-time object detection system using YOLOv8 and OpenCV achieving high accuracy and optimized inference speed.
- Created interactive ML dashboards and REST APIs for model prediction and analytics.
- Designed and implemented production-ready deployment pipelines including FastAPI, Docker, and automated code generation.
- Collaborated in fast-paced team environments in hackathons; contributed to ideation, development, and presentation of innovative solutions.

KEY PROJECTS

AutoML & Data Intelligence Platform **Tech: React, Node.js, Python, Scikit-learn**

- Developed a full-stack platform that automates the ML lifecycle — from data profiling and preprocessing to model training, evaluation, and deployment. Supports multiple algorithms, intelligent model ranking, visual analytics, and one-click export of APIs, Docker files, and production code. **GitHub**: github.com/HarshPopat23/MakeModelAI

Real-Time Object Detection System (YOLOv8 + OpenCV) **Tech: Python, OpenCV, PyTorch**

- Built a real-time object detection application with modular architecture and FPS benchmarking (CPU vs GPU). Implemented unit testing with PyTest for reliability. **GitHub**: github.com/HarshPopat23/YOLOv8-Object-Detection

RZero-Friction AI Health Companion **Tech: TensorFlow, Streamlit, Scikit-learn**

- Created an AI system that detects food from images, estimates nutritional value, fetches real-time AQI, and provides personalized health insights. **GitHub:** github.com/HarshPopat23/AI-Health-Companion

CERTIFICATIONS

2025-2026

- Google Cybersecurity Professional Certificate
- Security & Compliance on Google Cloud
- Google Security Operations (SIEM)
- Google Security Operations (SOAR)
- Security Command Center: Vulnerabilities / Misconfigurations
- Introduction to Security in the World of AI
- Automate Cybersecurity Tasks with Python

ACHIEVEMENTS

- Runner-Up – Engineering Hackathon
- Participated in 4+ Coding Contests
- Active Technical Content Creator on YouTube Shorts (simplifying technical and academic concepts)

RELEVANT COURSEWORK

2025-2026

- Data Structures & Algorithms
- Database Management Systems
- Operating Systems
- Computer Networks
- Object-Oriented Programming
- Machine Learning

SKILLS

- Languages: Python, C++, JavaScript
- AI/ML: TensorFlow, PyTorch, Scikit-learn, OpenCV
- Frontend: React, TypeScript, Tailwind CSS
- Backend: Node.js, Express.js, REST APIs
- Database: MongoDB, SQL
- Tools: Git, Docker, Jupyter Notebook
